

JTA ULTIMATE URBAN CIRCULATOR (U2C)

The Ultimate Urban Circulator (U2C) is a comprehensive program planned in three phases to modernize and expand the Skyway and introduce autonomous vehicles (AVs) into JTA's transportation system. By transforming the current Skyway, extending the reach within the urban core through the Bay Street Innovation Corridor and expanding beyond into adjacent neighborhoods, U2C supports the vision of a vibrant, revitalized and better-connected Downtown Jacksonville.

Client
Balfour Beatty

Location
